

## PDM NETWORK *Monthly Newsletter*

n. 5/May 2014

ISSN 2239-2033

Dear Partner, this *Newsletter* contains a list of the **latest uploaded resources** both in the documentation and in the event areas of the PDM Network website ([www.publicdebt.net.org](http://www.publicdebt.net.org)). The PDM Network has its main objective in the joint cooperation among its participants regarding the quantity and quality of information available on the website. So far, it is very appreciated a stronger collaboration in this field, **signaling to the Network Secretariat** any documents, news and events of interest at [publicdebt.net.dt@tesoro.it](mailto:publicdebt.net.dt@tesoro.it).

##### [The Damaging Bias of Sovereign Ratings \(2014\)](#)

Vernazza Daniel - UniCredit Bank London; Nielsen Erik F. - UniCredit Bank London; Gkionakis Vasileios - UniCredit Bank London

**Abstract:** An eye-watering USD 50 trillion in outstanding sovereign debt is guided by sovereign credit ratings. And, since these set the benchmark

for all other credit ratings, the implications of sovereign ratings extend much further.

Just three firms (Moody's, S&P and Fitch) dominate the market. They set ratings based on a combination of measurable fundamentals (the objective component) and the judgment of their in-house ratings committees (the subjective component).

In this paper, they decompose the ratings into their objective and subjective components. The authors find that, whilst the objective component of ratings is a good predictor of future sovereign default, the subjective component of ratings has no predictive

power on average for defaults one or more years ahead, but adds large distortions to individual ratings.

## Primary Market

### Effects of Eurobonds: a stochastic sovereign debt sustainability analysis for Portugal, Ireland and Greece (2014)

Tielens Joris - KU Leuven, van Aarle Bas - KU Leuven, Van Hove Jan - H.U. Brussel

**Abstract:** This paper assesses the impact of Eurobonds on sovereign debt dynamics for selected European member states (Greece, Ireland and Portugal). For each member state, the authors produce sovereign debt fan charts of (i) a baseline scenario (no Eurobonds) and (ii) a Full-Fledged Eurobond introduction. The key building blocks of our methodology are (i) a debt framework (which embeds the traditional recursive debt equation), (ii) a vector autoregressive model to take into account and parametrise macroeconomic uncertainty and (iii) a fiscal reaction function. Conditional on the absence of moral hazard, the authors find Eurobonds to be a good instrument to absorb macroeconomic shocks and to diminish uncertainty over future debt forecasts; for Ireland and Portugal, the authors find debt to be 20 percentage points lower than under our baseline scenario, by 2020.

## Secondary Market

### International capital flows and yields of public debt bonds (2014)

Leon Márcia Saraiva - Banco Central do Brasil

**Abstract:** The paper analyzes nominal yields of five-year fixed-rate Brazilian Domestic Federal Public Debt (DFPD) bonds in response to fluctuations in international net capital flows to Brazil for the period January 2007 to July 2012. The results show that estimation in differences with error correction obtains a long-run relationship between the yield, the foreign participation in the DFPD and the target Selic rate that reproduces previous results. When the ratio of net foreign long-term fixed-income investments relative to GDP is a substitute for foreign participation in the DFPD, the new explanatory variable is also significant in the long run, when the cointegrating equation includes the yield of five-year United States Treasury bonds. In turn, fiscal balance, investors' risk aversion, output gap, the tax rate on financial transactions made by nonresident investors and the effective rate of reserve requirements influence the yields in the short run.

## Risk Management Models

### How to Capture Macro-Financial Spillover Effects in Stress Tests? (2014)

Hesse Heiko - International Monetary Fund; Salman Ferhan - International Monetary Fund; Schmieder Christian - International Monetary Fund

**Abstract:** One of the challenges of financial stability analysis and bank stress testing is how to establish scenarios with meaningful macro-financial linkages, i.e., taking into account spillover effects and other forms of contagion. The authors come up with an approach to simulate the potential impact of spillover effects based on the "traditional" design of macro-economic stress tests. Specifically, the authors examine spillover effects observed during the financial crisis and simulate their impact on banks' liquidity and capital positions. The outcome suggests that spillover effects have a highly non-linear impact on bank soundness, both in terms of liquidity and solvency.

## Accounting, Transparency and Accountability

### Methodological Differences Among Maturity Indicators (2014)

Colbano Fabiano Silvio - Brazilian MoF; Dias Leister Mauricio - Brazilian MoF

**Abstract:** Although several countries report their maturity indicators under the same name, their methodology of calculation may be distinct. Accordingly, it is not possible to establish a direct comparison between indicators of different countries, even if these indicators have exactly the same name. The objective of this report is to analyze the methodological differences among the following indicators: Average Term to Maturity (ATM), Duration, Average Maturity and Average Life. The Brazilian National Treasury releases regularly two of them: ATM and Average Maturity, being this last one used as reference to year-end targets. On the other hand, the ATM appears to be the indicator most commonly used by other countries. The comparison among these indicators leads to the conclusion that, despite showing a greater conceptual coherence, the use of Average Maturity as the main debt indicator makes the Brazilian public debt be unfairly penalized when compared with international statistics, which are usually based on ATM.

## Coordination with other Policies and Operations

### EMU Sovereign Debt Market Crisis: Fundamentals-Based or Pure Contagion? (2014)

Gómez-Puig Marta - University of Barcelona; Rivero Simón Sosvilla - University of Madrid

**Abstract:** In this paper the authors empirically investigate whether the transmission of the recent crisis in euro area sovereign debt markets was due to fundamentals-based or pure contagion. To do so, the authors examine the behaviour of EMU sovereign bond yield spreads with respect to the German bund for a sample of both central and peripheral countries from January 1999 to December 2012. First the authors apply a dynamic approach to analyze the evolution of the degree of Granger-causality within the 90 pairs of sovereign bond yield spreads in our sample, in order to detect episodes of significantly increased causality between them (which the authors associate with contagion) and episodes of significantly reduced interconnection (which the authors associate with immunization). The authors then use an ordered logit model to assess the determinants of the occurrence of the episodes detected. Our results suggest the importance of variables proxying market sentiment and of variables proxying macro fundamentals in determining contagion and immunization outcomes. Therefore, our findings underline the coexistence of "pure" and "fundamentals-based contagion" during the recent European debt crisis.

### A Fiscal-Monetary Policy Scheme Against Greek Indebtedness and Impoverishment (2014)

Soldatos Gerasimos T. - American University of Athens

**Abstract:** Troika economics has brought Greece to a serious depression at a zero lower bound, with near unlimited supply of labor and near unlimited demand for money. In this paper, it is argued that these circumstances dictate to Greece the implementation individually of a long-term self-financing deficit-spending plan as a means of putting money into circulation in the country. Such a seigniorage-based self-financing deficit-spending, will boost demand and in response, output, tax base and tax revenue given the tax rate, with the increase in revenue being more than enough to be covering the deficit, and the excess revenue being channeled to paying out the accumulated debt. A k-percent monetary growth rule and constant inflation rate should be put forward, domestic credit expansion should be kept below OECD average, and potential output and tax Laffer curve assessments should be keeping track of the changing hysteresis effect. In view of the political instability plaguing

modern Greece, the k-percent, balanced-budget, and no-open-market operations (unless under acts of God) rules should be constitutionalized (along with the tax system).

### Why Are Banks Not Recapitalized During Crises? A Political Economy Explanation (2014)

Crosignani Matteo - New York University (NYU)

**Abstract:** I develop a model where governments have an incentive to keep their financial sectors undercapitalized during crises. Protected by limited liability, highly levered banks buy domestic bonds that are correlated with their other sources of revenue. In anticipation, governments set milder capital requirements to increase their future debt capacities when they most need to borrow. Myopic governments are more likely to induce high private sector debt, triggering a "race to the bottom" in capital regulation among countries. Using a general equilibrium model, I can rationalize, in the context of the Euro crisis, the increasing demand for domestic government bonds in the periphery, the crowding-out effect in private lending, and the reluctance to recapitalize the banking sector.

### What Happened in Cyprus? The Economic Consequences of the Last Communist Government in Europe (2014)

Orphanides Athanasios - Massachusetts Institute of Technology (MIT)

**Abstract:** This paper reviews developments in the Cypriot economy following the introduction of the euro on 1 January 2008 and leading to the economic collapse of the island five years later. The main cause of the collapse is identified with the election of a communist government in February 2008, within two months of the introduction of the euro, and its subsequent choices for action and inaction on economic policy matters. The government allowed a rapid deterioration of public finances, and despite repeated warnings, damaged the country's creditworthiness and lost market access in May 2011. The destruction of the island's largest power station in July 2011 subsequently threw the economy into recession. Together with the intensification of the euro area crisis in the summer and fall of 2011, these events weakened the banking system which was vulnerable due to its exposure in Greece. Rather than deal with its fiscal crisis, the government secured a loan from the Russian government that allowed it to postpone action until after the February 2013 election. Rather than protect the banking system, losses were imposed on banks and a campaign against them was coordinated and used as a platform by the communist party for the February 2013 election. The strategy succeeded in delaying resolution of the crisis and avoiding short-term political cost for the

communist party before the election, but also in precipitating a catastrophe right after the election.

---

### **Adjustments in the Eurozone: Varieties of Capitalism and the Crisis in Southern Europe (2014)**

Hassel Anke - Hertie School of Governance

**Abstract:** This paper investigates the causes of, and reactions to, the Eurozone crisis, focusing in particular on the institutional foundations of the four Southern European Eurozone countries that have encountered an acute sovereign debt crisis. Applying the basic arguments featured in the Varieties of Capitalism literature, the paper aims to show how the interaction of the institutional set-up of coordinated and mixed market economies, with the effects of the common currency area, can explain both the evolution of the crisis, as well as the reactions to it. This paper interprets the sovereign debt crisis in the Eurozone as the combination of two features: firstly, the architecture of the common currency area, which instituted a common interest rate for widely heterogeneous regional economies, and secondly, the specific institutional foundations of two types of economies participating in the Eurozone, namely coordinated market economies and mixed market economies. Understanding these two factors and their interaction not only helps to explain why the Southern European countries were particularly vulnerable to exploding public debt, but also why, during the on-going resolution of the Eurozone crisis over the last two years, policy makers have persistently preferred austerity over the mutualization of debt. The compensatory role of the state in mixed-market economies thereby undermines the effectiveness of financial bail-outs for economic growth strategies.

---

### **Mauritania: counting on natural wealth for a sustainable future (2014)**

Mele Gianluca - The World Bank

**Abstract:** A data set of key macro-sustainability indicators, constructed after several fact-finding missions, and World Bank methodologies on estimating wealth accounting are used to study Mauritania's wealth, which is estimated to be between USD50 and USD60 billion. The country's produced wealth represents roughly 12 percent of total wealth, much less than in lower-middle-income countries; by contrast, natural wealth represents approximately 45 percent of the total figure. Renewable resources account for slightly less than two-thirds of natural wealth, with fisheries alone equaling about one-fourth of natural wealth. This is good news for Mauritania, as sound management of these resources may ensure a constant flow of resources in the future and therefore -- with adequate policies -- the

achievement of the same or higher levels of welfare for future generations. On the negative side, however, the ratio of net adjusted savings over gross national income is estimated to have been negative since 2006, meaning that the wealth of the country is being depleted. Mauritania has recently joined the ranks of lower-middle-income countries, largely thanks to its considerable natural resources endowment. Over time the mining sector's contribution to gross domestic product has grown significantly and important discoveries continue to be made. The overarching objective of this wealth accounting exercise is thus to support Mauritania to measure its assets better and achieve a more complete picture of the prospects for future income, with a view to better orienting public policies toward sustainable growth and shared prosperity. The paper concludes with several indicative policy recommendations

---

### **Inflation Targeting and Fiscal Rules: Do Interactions and Sequencing Matter? (2014)**

Combes Jean-Louis - University of Auvergne, France; Debrun Xavier - International Monetary Fund; Minea Alexandru - University of Auvergne, France; Tapsoba Rene - International Monetary Fund

**Abstract:** The paper examines the joint impact of inflation targeting (IT) and fiscal rules (FR) on fiscal behavior and inflation in a broad panel of advanced and developing economies over the period 1990-2009. The main contribution of the paper is to show that, as suggested by the theoretical literature, interactions between FR and IT matter a great deal for policy outcomes. Specifically, the combination of FR and IT appears to deliver more disciplined macroeconomic policies than each of these institutions in isolation. In addition, the sequencing of the monetary and fiscal reforms plays a role: adopting FR before IT delivers stronger results than the reverse sequence.

---

### **Overaccumulation, public debt, and the importance of land (2014)**

Homburg Stefan - Leibniz Universität Hannover

**Abstract:** In recent contributions, Weizsäcker (2014) and Summers (2014) maintain that mature economies accumulate too much capital. They suggest large and lasting public deficits as a remedy. This paper argues that overaccumulation cannot occur in an economy with land. It presents novel data of aggregate land values, analyzes the issue in a stochastic framework, and conducts an empirical test of overaccumulation.

---

## [Disappearing government bond spreads in the eurozone – Back to normal? \(2014\)](#)

De Grauwe Paul - London School of Economics; Ji Yuemei - Brunel University

**Summary:** Since the announcement of the Outright Monetary Transactions (OMT) program by Mario Draghi, President of the ECB, in 2012, the government bond spreads began a strong decline. This paper finds that most of this decline is due to the positive market sentiments that the OMT program has triggered and is not related to underlying fundamentals, such as the debt-to-GDP ratios or the external debt position that have continued to increase in most countries. The authors even argue that the market's euphoria may have gone too far in taking into account the same market fundamentals. They conclude with some thoughts about the future governance of the OMT program.

## **Monetary Policy**

### [Debt Deflation Effects of Monetary Policy \(2014\)](#)

Lin Li - International Monetary Fund; Tsomocos Dimitrios P. - University of Oxford; Vardoulakis Alexandros P. - Federal Reserve Board, Washington, D.C.

**Abstract:** This paper assesses the role that monetary policy plays in the decision to default using a General Equilibrium model with collateralized loans, trade in fiat money and production. Long-term nominal loans are backed by collateral, the value of which depends on monetary policy. The decision to default is endogenous and depends on the relative value of the collateral to face value of the loan. Default results in foreclosure, higher borrowing costs, inefficient investment and a decrease in total output. The authors show that pre-crisis contractionary monetary policy interacts with Fisherian debt-deflation dynamics and can increase the probability that a crisis occurs.

### [ECB monetary policy surprises: identification through cojumps in interest rates \(2014\)](#)

Winkelmann Lars - Freie Universität Berlin; Bibinger Markus - Humboldt-Universität Berlin; Linzert Tobias - European Central Bank

**Abstract:** This paper proposes a new econometric approach to disentangle two distinct response patterns of the yield curve to monetary policy announcements. Based on cojumps in intraday tick-data of a short and long term interest rate, the authors develop a day-wise test that detects the

occurrence of a significant policy surprise and identifies the market perceived source of the surprise. The new test is applied to 133 policy announcements of the European Central Bank (ECB) in the period from 2001-2012. Our main findings indicate a good predictability of ECB policy decisions and remarkably stable perceptions about the ECB's policy preferences.

### [Central Bank Financial Strength in Central America and the Dominican Republic \(2014\)](#)

Swiston Andrew - International Monetary Fund; Frantischek Florencia - International Monetary Fund; Gajdeczka Przemek - International Monetary Fund; Herman Alexander - International Monetary Fund

**Abstract:** This paper examines the financial strength of central banks in Central America and the Dominican Republic (CADR). Some central banks are working off the effects of intervention in distressed financial institutions during the 1990's and early 2000's. Their net income has improved since then owing to lower interest rates, a reduction in interest bearing debt, and recapitalization transfers. Claims on the government have fallen, but remain high and are typically reimbursed at below-market rates, and capital is negative when adjusting for this. Capital is sufficient to back a low inflation target given that the income position is supported by unremunerated reserve requirements. Capital is likely to increase over time, but only gradually, leaving countries vulnerable to macroeconomic risks. The capacity of CADR central banks to engage in macroeconomic stabilization would benefit from increased emphasis on low inflation as the primary objective of monetary policy and a stronger commitment by governments to recapitalization

### [Time-Varying Neutral Interest Rate—The Case of Brazil \(2014\)](#)

Perrelli Roberto - International Monetary Fund; Roache Shaun K. - International Monetary Fund

**Abstract:** Emerging markets have experienced a sizeable decline in their neutral real interest rates until recently. In this paper the authors try to identify the main factors that contributed to it, with a focus on Brazil. The authors estimate an interval for Brazil's time-varying neutral rate based on a range of structural and econometric models. The authors assess the implications of incorrectly estimating a time-varying neutral rate using a small structural model with a simple monetary policy instrument rule. The authors find that policy prescriptions are very different when facing uncertainty of neutral rate and of output gap. Our result contrasts sharply with Orphanides (2002), suggesting that the best response to neutral rate

uncertainty is to ensure policy remains highly sensitive to inflation and output variations.

---

## **Fiscal Policy and Budget Management**

### **Political Competition and the Limits of Political Compromise (2014)**

Cunha Alexandre B. - Federal University of Rio de Janeiro; Ornelas Emanuel - London School of Economics

**Abstract:** In this paper the authors consider an economy where competing political parties alternate in office. Due to rent-seeking motives, incumbents have an incentive to set public expenditures above the socially optimum level. Parties cannot commit to future policies, but they can forge a political compromise where each party curbs excessive spending when in office if it expects future governments to do the same. The authors find that if the government cannot manipulate state variables, more intense political competition fosters a compromise that yields better outcomes, potentially even the first best. By contrast, if the government can issue debt, vigorous political competition can render a compromise unsustainable and drive the economy to a low-welfare, high-debt, long-run trap. Our analysis thus suggests a legislative tradeoff between restricting political competition and constraining the ability of governments to issue debt.

---

### **Fiscal Adjustment and Income Inequality: Sub-national Evidence from Brazil (2014)**

Azevedo João Pedro - World Bank; David Antonio C. - International Monetary Fund; Rodrigues Bastos Fabiano - International Monetary Fund; Pineda Emilio - IADB

**Abstract:** In this paper the authors combine state-level fiscal data with household survey data to assess the links between sub-national fiscal policy and income inequality in Brazil over the period 1995-2011. The results indicate that a tighter fiscal stance at the sub-national level is not associated with a deterioration in inequality measures. This finding contrasts with the conclusions of several papers in the burgeoning literature on the effects of fiscal consolidation on inequality using national data for OECD economies. In addition, the authors find that a tighter stance is typically positively associated with a measure of "shared prosperity". Hence, our results caution against extrapolating policy implications of the literature focusing on advanced economies to other settings.

---

## **Public Debt in Macroeconomic Analysis**

### **Managing Credit Bubbles (2014)**

Martin Alberto - CREI; Ventura Jaume - CREI

**Abstract:** In this paper the authors study a dynamic economy where credit is limited by insufficient collateral and, as a result, investment and output are too low. In this environment, changes in investor sentiment or market expectations can give rise to credit bubbles, that is, expansions in credit that are backed not by expectations of future profits (i.e. fundamental collateral), but instead by expectations of future credit (i.e. bubbly collateral). During a credit bubble, there is more credit available for entrepreneurs: this is the crowding-in effect. But entrepreneurs must also use some of this credit to cancel past credit: this is the crowding-out effect. There is an "optimal" bubble size that trades off these two effects and maximizes long-run output and consumption. The "equilibrium" bubble size depends on investor sentiment, however, and it typically does not coincide with the "optimal" bubble size. This provides a new rationale for macro prudential policy. A lender of last resort can replicate the "optimal" bubble by taxing credit when the "equilibrium" bubble is too high, and subsidizing credit when the "equilibrium" bubble is too low. This leaning-against-the-wind policy maximizes output and consumption. Moreover, the same conditions that make this policy desirable guarantee that a lender of last resort has the resources to implement it.

---

### **Understanding the Emergence of Public Debt (2014)**

Fochmann Martin - University of Hannover, Germany  
Sadrieh Abdolkarim - University of Magdeburg, Germany; Weimann Joachim - University of Magdeburg, Germany

**Abstract:** In this paper the authors use a controlled laboratory experiment with and without overlapping generations to study the emergence of public debt. Public debt is chosen by popular vote, pays for public goods, and is repaid with general taxes. With a single generation, public debt is accumulated prudently, never leading to over-indebtedness. With multiple generations, public debt is accumulated rapidly as soon as the burden of debt and the risk of over-indebtedness can be shifted to future generations. Debt ceiling mechanisms do not mitigate the debt problem. With overlapping generations, political debt cycles emerge, oscillating with the age of the majority of voters.

---

## [A Politico-economic Approach on Public Debt in an Endogenous Growth Economy \(2014\)](#)

Arai Real - Hiroshima University; Naito Katsuyuki - Asia University, Tokyo

**Abstract:** In this paper the authors consider an overlapping generations closed economy in which a government finances the cost of public good provision by labor income taxation and/or public debt issuance. The size of these public policies is determined in a repeated probabilistic voting game. The authors investigate the characteristics of a Markov perfect politico-economic equilibrium in which the size of public policies depends on both the stock of public debt and the level of physical capital, and show that individuals' stronger preferences for public good provision tighten fiscal discipline and promote economic growth.

## Historical Evolution of Debt Management

### [Dealing with risk: Underwriting sovereign bond issues in London 1870-1914 \(2014\)](#)

Mikkelsen Anders L. - King's College London

**Abstract:** Using the records of several leading 19th century issuing houses, this paper analyses the transformation of underwriting practices in London's primary sovereign bond market from 1870 to 1914.

It shows how underwriting risk developed from being a liability, which market intermediaries sought to avoid, to becoming a valuable financial commodity. The impetus for this development was increased competition in the loan business from the 1880s onwards, which weakened the negotiating position of issuing houses and forced them to shoulder an increasing share of the underwriting risk. Issuing houses had to find methods to deal with this risk, but they were initially hamstrung by public perception of underwriting as detrimental to the interests of ordinary investors. Firms began to adopt informal underwriting arrangements, with limited scope, but these only allowed for a relatively limited distribution of underwriting risk to third parties, the danger of which was exposed during the Baring crisis. Consequently formal underwriting syndicates were developed, allowing for a greater dissemination of underwriting risk. This meant that the risk associated with issuing loans could be broken down into sufficiently small tranches so that no underwriter had to shoulder a risk greater than what he desired. As a result underwriting risk came to be seen as a profitable investment opportunity, a financial commodity in its own right, and a means of patronage for issuing houses.

## Articles in reviews/in books

### Core Topics

#### [Debt Markets in Emerging Economies: Major Trends \(2014\)](#)

Didier Tatiana, Schmukler Sergio - World Bank Group

**Abstract:** This paper documents the major trends in debt (bank and bond) markets in emerging economies since the early 1990s, when these markets started expanding. The paper shows that banks have increased in size in most emerging economies though from low bases. But bond markets have expanded even more, gaining importance relative to banks. The nature of financing has also changed. Local currency bond financing has expanded, the extent of dollarization of loans and bonds has declined, and the maturity of public and private sector bonds has typically increased. However, not all regions have moved in the same direction. Eastern Europe for instance increased its foreign currency debt before the global

financial crisis. Relative to developed countries, emerging countries' financial systems still remain in many aspects underdeveloped. Except in a few cases, liquidity in secondary bond markets has been declining. And the public sector captures a significant share of bond markets.

### Primary Market

#### [Risk, ambiguity, and sovereign rating \(2014\)](#)

Di Caro Paolo - University of Catania

**Abstract:** Decisions of investing in sovereign assets involve both risk and ambiguity. Ambiguity arises from unknown elements characterizing the value of a generic sovereign. In presence of ambiguity, ambiguity-averse investors are prone to pay for obtaining summary information such as ratings which reduces ambiguity. Ambiguity-neutral and ambiguity-averse investors, then, make decisions on

the basis of different informative sources. By presenting a simple model of sovereign rating under ambiguity, three facts occurring in today's financial markets are explained. Sovereign ratings influence decisions of investment of ambiguity-sensitive individuals. Rating-dependent regulations create distortions in financial markets by institutionalising specific summary signals. Providing ratings may be a profitable activity. Some final suggestions propose future areas of theoretical and empirical research.

---

## Secondary Market

### [The determinants of euro area sovereign bond yield spreads during the crisis \(2014\)](#)

European Central Bank - European Central Bank

**Abstract:** Sovereign bond yields are generally used as benchmark reference rates to price key interest rates, such as lending rates to households and corporations, and corporate bond yields. Therefore, the study of their determinants is important to understand the monetary transmission mechanism and its possible impairments. For example, when setting the remuneration on deposits, banks compete with yields on bonds and Treasury bills issued by the government. In countries where such yields have become less responsive to policy rates, monetary policy may be less effective in steering banks' funding costs.[...]

---

## Legal Issues

### [The Relationship between the International Investment Arbitration and Sovereign Debt Restructuring \(2014\)](#)

Chan Kai-wei - National Taiwan University

**Abstract:** The two cases of *Abaclat and others v. Argentina Republic* and *Ambiente Ufficio S.p.A. and others v. Argentine Republic* have attracted much attention in the application of international investment arbitration in sovereign debt restructuring. However, the relationship between the international investment law and the sovereign debt restructuring is complex and controversial, since the widespread investment arbitration may hinder the process of sovereign debt restructuring. It may even eradicate its role in the sovereign debt issues under the international investment law framework. To avoid such problems, international investment arbitration under BITs should be applied to sovereign debt restructuring in a more restrictive manner.

---

## Coordination with other Policies

### [Monetary and debt-concerned fiscal policies interaction in monetary unions \(2014\)](#)

Foresti Pasquale - University of Catanzaro

**Abstract:** In this paper a monetary union model with debt-concerned fiscal authorities is presented. Under this circumstance it is assumed that monetary policy is implemented on the basis of union-average data, while in each member country fiscal policies are conducted on the basis of national data. It is shown that in this setup the effects of macroeconomic shocks on national debts and deficits are heterogeneous across countries and a country by country analysis is needed. Moreover, the gap between the debt in a single member country and its union average turns out to be a key element, more than the level of debt itself. Countries with a debt above the union average do not attain the targets and different equilibrium levels of debt can endanger the existence of the union.

---

## Fiscal Policy and Budget Management

### [Advantages and Disadvantages of Fiscal Discipline in Bulgaria in Times of Crisis original article \(2014\)](#)

Petkov Vasil S. - University of National and World Economy (UNWE)

**Abstract:** The global economic crisis of 2008 has posed serious challenges to the Bulgarian economy and was reflected in worsened macroeconomic indicators. The subsequent sovereign debt crisis in Europe further aggravated the situation and blocked its path to recovery. In line with the overall sentiment in the European Union (the EU), Bulgaria made maintaining fiscal stability a priority that it set out to accomplish by following a policy of austerity. The country managed to achieve the desired effect relatively quickly. It became one of the best performers in terms of budget deficit and government debt as a share of GDP (which are among the lowest in the EU). These accomplishments underlie international institutions' greater confidence in Bulgaria, which has led to an increase in its credit rating. Nevertheless, the state has not managed to reap the maximum benefits that this type of policy offers. Fiscal sustainability was accomplished at the expense of economic growth, the slow pace of which was accompanied by impoverishment of the population, high unemployment, restricted consumption, and operational difficulties faced by real-sector companies. These problems fueled doubts about the adequacy of strict budget discipline, especially in times of crisis. They provoked the author to examine in greater depth the benefits and the drawbacks that such a policy ultimately offers to Bulgaria. The results show that the strict fiscal measures have put

additional pressure on the already fragile economic growth and have a high social cost as well. All this justifies the need for the government to take on a new course to achieve economic recovery by means of more active state support that would stimulate a pickup in consumption and production activity.

---

### [Fiscal policy, net exports, and the sectoral composition of output in Greece \(2014\)](#)

Tagkalakis Athanasios O. - Bank of Greece

**Abstract:** This paper investigates the effects of fiscal policy shocks on net export performance and the sectoral composition of output in Greece in the post 2000 period. A reduction in government

spending (or tax hike) exerts a negative response on output which reduces import demand. A cut back in government spending boosts exports through the labor cost competitiveness channel further improving net exports. Tax hikes in particular on social security contributions and other indirect taxes reduce export performance. Although real aggregate output declines following a cut in government spending, the tradable sector output responds positively, further improving net exports.

---

## Books

### **Institutional arrangements for Debt Management**

#### [The Little Data Book 2014](#)

The World Bank

**Summary:** The Little Data Book 2014 is a pocket edition of World Development Indicators 2014. It is intended as a quick reference for users of the World Development Indicators database, book, and mobile app. The database covers more than 1,200 indicators and spans more than 50 years. The 214 country tables present the latest available data for World Bank member countries and other economies with populations of more than 30,000. The 14 summary tables cover regional and income group aggregates.

---

#### [Inside the Euro Crisis: An Eyewitness Account \(2014\)](#)

Djankov Simeon - New Economic School in Russia

**Summary:** In mid-2009 Simeon Djankov, who had dealt with a variety of economic and financial crises as chief economist for finance and private sector development at the World Bank, was suddenly thrust into the job of finance minister of his native Bulgaria. For nearly four years in that post, he attended more than 40 meetings of European finance ministers and had a front row seat at the intense discussions and struggles to overcome the

economic and financial crisis that threatened to unravel the historic undertaking of an economically integrated Europe. In this personal account, Djankov details his odyssey on the front lines, observing Europe's fitful efforts to contain crises in Greece, Hungary, Ireland, Portugal, Spain, Italy, Cyprus, and France. He tells the inside story of how the European Central Bank assumed responsibility for the crisis, pledging to do "whatever it takes" to save the euro area. This candid book recounts the disagreements over fiscal austerity, monetary policy, and banking supervision, while focusing on the personalities who promoted progress—and those who opposed it. He also tells the dramatic story of the events that led to his own resignation as finance minister in 2013 over the policies he was pursuing to spare Bulgaria from getting sucked into the crisis.

---

#### [Presupuestos para el desarrollo en América Latina \(2014\) Downloadable](#)

Cullell Mario Marcel - OECD; Guzmán Salazar Marcela - International consultant; Sanginés Mario F. - IDB

**Summary:** This book seeks to explore the relationship between budget and performance of public administration in the proper context of the emerging countries in general and Latin America in particular.

### **Governor of the Reserve Bank of Australia Speaks on the Impact of Global Financial Regulatory Development in Asia - June 10, 2014**

Reserve Bank of Australia

In a speech before the Federal Reserve Board of San Francisco's Symposium on Asian Banking and Finance, Reserve Bank of Australia Governor Glenn Stevens highlighted the importance of engaging Asian jurisdictions in Financial Stability Board and G20 deliberations on global financial regulatory cooperation. Stevens identified four major themes on which the global regulatory discussion should continue to focus: Basel III implementation, derivatives, shadow banking, and 'too big to fail' institutions.

---

## **Risk Management Models**

### **Is Europe Overbanked?**

ESRB

The European Systemic Risk Board's Advisory Scientific Committee published a report titled "Is Europe Overbanked?" The report claims that banking has expanded excessively for a number of reasons, including public bank support and inadequate prudential supervision, and political support encouraging banks to expand. It also includes recommendations for policies that could solve the problem by reducing excessive private credit creation, rebalance the EU's financial structure away from banks, and mitigate the risks of banks' "non-bank" activities.

---

### **Chancellor of the Exchequer announces Fair and Effective Markets Review - June 12, 2014**

Bank of England

The Bank of England, the Financial Conduct Authority and HM Treasury announced that they will hold a joint review entitled the "Fair and Effective Financial Markets Review," which will cover trading practices, scope of regulation, the impact of recent and forthcoming regulation, and firm supervision.

### **[Turbulence in Emerging Economies: From Easy Money to Hard Landing?](#)**

International Debt Observatory

Before the world economy has been able to fully recover from the crisis that began more than five years ago, there is a widespread fear that we may be poised for yet another crisis, this time in emerging economies (EEs).[...]

---

### **[How much do countries benefit from membership in the European Union?](#)**

VOX

In the wake of the recent crisis, the debate about the economic benefits from EU membership has intensified. This column presents new results about the benefits countries derive from becoming EU members, using data from the 1980s and 2004 enlargements. There are substantial positive pay-offs, with a gain in per capita GDP of approximately 12%. Despite differences across countries, the evidence shows that the benefits of EU membership outweighed the costs for most countries – except for Greece. An important research question would be to identify factors that allow countries to better exploit EU entry.

---

### **[Financial innovation and financial stability – comments](#)**

BIS

Speech by Mr Seppo Honkapohja, Member of the Board of the Bank of Finland, at the Shanghai Forum, Shanghai, 26 May 2014.

### **OECD Economic Surveys: Euro Area 2014**

OECD

This 2014 edition of OECD's Economic Survey of the Euro Area examines recent economic developments, prospects and policies. A special chapter covers making the Euro Area function better: the banking union and fiscal framework.

### **OECD Economic Surveys: European Union 2014**

Oecd

OECD's 2014 Economic Survey of the European Union examines recent economic developments, prospects and policies. A special chapter covers reinvigorating the EU single market.

### **MPDD Policy Briefs No. 23, May 2014 "Macroeconomic policies in post-conflict resource rich countries"**

Unescap.org

Many resource-rich countries have failed to achieve sustained and stable growth, with economic diversification elusive and poverty reduction slower than in countries without such endowments. Stable growth, diversification and poverty reduction become much harder to achieve when a resource rich country suffers from internal conflict. The problem becomes even greater in resource rich countries because of the domestic instability generated by global commodity markets even in the absence of conflict. The purpose of this Policy Brief is to suggest guidelines for macroeconomic policy when the challenge of natural resource management confronts the need for post-conflict peace building.

## **Monetary Policy**

**[Monthly Bulletin- May 2014](#)**

European Central Bank

The monthly bulletin contains information on Economic and Monetary developments [...]

---

**[Concerns about competitive monetary easing](#)**

BIS

Remarks by Dr Raghuram Rajan, Governor of the Reserve Bank of India, in the Policy Panel Discussion, at the "2014 BOJ-IMES Conference on Monetary Policy in a Post-Financial Crisis Era", organised by the Institute of Monetary and Economic Studies and Bank of Japan, Tokyo, 28 May 2014.

---

**[How Should China Ease Monetary Policy?](#)**

The Peterson Institute for International Economics

There is increasing inconsistency between China's economic fundamentals and the monetary policy, which appears to be too tight. There has been no major monetary policy change in China since 18 May 2012 when the People's Bank of China (PBoC) cut the required reserve ratio (RRR) by 50 basis points on 18 May 2012. However, the Chinese economy and financial markets have experienced significant changes over the past two years.

---

**[Kuroda's Plan Is Working](#)**

The Peterson Institute for International Economics

The Bank of Japan's policies over the last 14 months are a welcome return to sanity. Mainstream economists inside and outside Japan had been asking the BOJ to stand up against deflation for nearly two decades. Under Governor Haruhiko Kuroda's leadership, there are three important improvements that the BOJ has made to its monetary regime. It is not just about the specific targets and tools pursued—a new monetary regime is one that creates a larger set of expectations about policy that ripple through to price- and wage-setting decisions in the entire economy.

---

**[The ECB Can and Should Make the ABS Market Happen](#)**

The Peterson Institute for International Economics

The European Central Bank (ECB) clearly will announce some package of expansionary measures on Thursday—as well it should, given sustained below target inflation in the euro area and forecasts of further falls. The most important and promising policy it will announce is the one with the longest lead time: fostering a market in securitized lending in Europe, primarily for loans to small and medium-sized enterprises (SMEs), through direct purchases of such asset-backed securities (ABS). This is absolutely the right initiative for the ECB to take because it is not only going to be effective (unlike limited interest rate cuts or very long-term refinancing of bank loans, also likely to be announced), but will address the right problems and do so with lasting structural benefits.

---

**[Redesigning the central bank for financial stability responsibilities](#)**

BIS

Central banks are being redesigned to better deal with their financial stability responsibilities - in just five years, over 60 central banks' laws have been changed. Since much of the responsibility for financial stability policy is shared, integrating financial stability considerations into monetary policy, and vice versa, presents tough institutional challenges. Independence of action against the build-up of financial imbalances is important. It is crucial to avoid a bias towards inaction.

---

### **William C Dudley: The economic outlook and implications for monetary**

BIS

Remarks by Mr William C Dudley, President and Chief Executive Officer of the Federal Reserve Bank of New York, before the New York Association for Business Economics, New York City, 20 May 2014.

---

### **Mario Draghi: Monetary policy in a prolonged period of low inflation**

BIS

Speech by Mr Mario Draghi, President of the European Central Bank, at the ECB Forum on Central Banking, Sintra, Portugal, 26 May 2014.

---

### **Ravi Menon: Getting in all the cracks or targeting the cracks? Securing financial**

BIS

Opening remarks by Mr Ravi Menon, Managing Director of the Monetary Authority of Singapore, at the Asian Monetary Policy Forum (AMPF), Singapore, 24 May 2014.

---

## **Fiscal policy and Budget Management**

### **Inequalities and the Essential Role of Fair Taxation Report Launched**

African Forum and Network on Debt and Development (AFRODAD)

Unprecedented economic growth in a number of African countries is going hand in hand with soaring inequality which national tax systems are failing to address, according to the Africa Rising? - Inequalities and the Essential Role of Fair Taxation Report launched on 26 February 2014 by the African Forum and Network on Debt and Development (AFRODAD) in collaboration with Tax Justice Network Africa (TJN-A) and Christian Aid (CA).

---

### **Budget Speech 2014-15 – Pakistan**

Ministry of Finance Pakistan

This budget 2014-15 is a very comprehensive agenda of economic reforms aimed to reinvigorate the economy, spur growth, maintain price stability, provide jobs to the youth and rebuild the key infrastructure of the country. [...]

---

### **Russian Federation: Fiscal Transparency Evaluation - IMF Country Report No. 14/ 134**

International Monetary Fund

The Fiscal Affairs Department (FAD) and Statistics Department (STA) of the International Monetary Fund (IMF) visited Moscow during the period October 15-30, 2013 to conduct a pilot Fiscal Transparency Evaluation (FTE). The objective of the mission was to evaluate Russia's fiscal reporting, fiscal forecasting and budgeting, and fiscal risk management practices against the standards set by the revised draft of the IMF's Fiscal Transparency Code (FTC). [...]

---

## **Public Debt in Macroeconomic Analysis**

### **Determinants of the growth and sovereign debt correlation**

VOX

Public debt and economic growth are historically negatively correlated. This column discusses new evidence that rejects the debt-to-growth causality. After estimating the effects between debt and growth in both directions, there is no evidence that high indebtedness suppresses economic growth. The effect of growth on debt is the main driver of the negative correlation.

---

### **The macroeconomic importance of capital markets**

BIS

Speech by Dr Jens Weidmann, President of the Deutsche Bundesbank, at the annual reception of Deutsches Aktieninstitut e. V., Frankfurt am Main, 22 May 2014.

### REMINDER...

#### e-LEARNING COURSE MATERIALS

The PDM network website hosts materials from e-learning course "ADVANCED RISK MANAGEMENT" organized by UNITAR thanks to Enrique Cosio-Pascal contribution.

The four modules course is downloadable from the Reserved Area of the website in the Section "Learning Area". This course is oriented toward those economists and financial specialists that would be dealing with financial risk management issues.

## Some figures

On 26<sup>th</sup> June 2014, the number of total resources of the PDM Network website is 20.038 (of which 14.856 news, 2.308 papers and articles in reviews and books, 211 books and 1.919 webresources). The Members are 761, coming from 110 countries. 405 Partners belong to sovereign debt management institutions of emerging and advanced countries. This newsletter is sent to 580 Partners.

### Special thanks

The PDM Secretariat is grateful to Iohanna Markidou (Cypriot MoF), Muchenje Ruvimbo (AFDB), Alvaro Manoel (World Bank), IIF – Institute of International Finance and Brazilian MoF for their resource contributions.
